

Query Cache for Joomla 1.0.x

Contributed by Administrator
Thursday, 03 March 2011

Query Cache is a component that caches your MySQL queries and increase your site loading speed and also massively reduces the hits on your database.

This is a very recommended component for the old Joomla versions.

Here is the download section of the developer site:

http://www.joomlaperformance.com/component/option,com_docman/task,cat_view/gid,40/Itemid,39/
