Add-Meta-Tags is a great plugin i use on this site:
<http://www.adverfix.com/>

It automaticaly adds meta tags (description and keywords) to your wordpress site.
It's doing the task beautifully and seamlessly.

The auto tags are taken from the content of each article.
You can manually adjust and change every parameter yourself.

Here is the developer site:
<http://www.g-loaded.eu/2006/01/05/add-meta-tags-wordpress-plugin/>
