If you want to Remove the Joomla Generator tag from your website, just find the file includes/frontend.php and delete the line: `$mainframe->addMetaTag( 'Generator', $_VERSION->PRODUCT . " - " . $_VERSION->COPYRIGHT);`

Thats it, now all kind of components writers wont sneak into your Joomla code by using this tag.

In Joomla 1.5 it's in here:

`/libraries/joomla/document/html/renderer/head.php`

Delete the line: `$strHtml .= $tab.'<meta name="generator" content="'. $document->getGenerator()." />'.$InEnd;`
