

Prevent backslashes from getting filtered in FireBoard posts

If you see that every link you wrote in a Fireboard forum is getting stripped of its backslashes, its done for some security issues.

I like it when you can see backslashes in URLs, but that's just me.

If you want to bring them back, do this:

Find the file: [JOOMLA SITE FOLDER]/components/com_fireboard/template/default/view.php

Replace this line: `$fb_message_txt = stripslashes(smile::smileReplace($fb_message_txt, 0, $fbConfig['disemoticons'], $smileyList));`

With this line: `$fb_message_txt = smile::smileReplace($fb_message_txt, 0, $fbConfig['disemoticons'], $smileyList);`

Thats it, problem solved.

(This solution was discovered by Raghu Veer from <http://www.securitywonks.net/>)
