If you want to remove the count of links from the statistics module and leave only the important stuff do this:

Find this file: `yousite/modules/mod_stats.php`

In line 49, remove this code: `$query="SELECT COUNT(id) AS count_links"`

```
. "\n FROM #__weblinks"
```

```
. "\n WHERE published = 1"
```

```
;
```

```
$database->setQuery($query);
```

```
echo "<strong>._LINKS_STAT.</strong> ".$database->loadResult() . "<br />\n";
```

Save the file and upload it back to your server. Now the line that stated the number of link is not there.
